Enterprise Cybersecurity Architecture Domain Model
SABSA
Contextual Architecture
Conceptual Architecture
Logical Architecture
Physical Architecture
Component Architecture
Management Architecture
Governor's View
The Governor's View is not a SABSA architecture layer. It is a collection of relevant viewpoints related to governance. This includes architecture governance which can be augmented by COBIT, which contains Enterprise Architecture controls. Enterprise Architecture controls can be extended or adapted to Enterprise Cybersecurity Architecture.

TOGAF-ADM
Preliminary
Phase A: Architecture Vision
Phase B: Business Architecture
Phase C: Information Systems Architecture
Phase D: Technology Architecture
Phase E: Opportunities & Solutions
Phase F: Migration Planning
Phase G: Implementatoion Governance
Phase H: Architecture Change Management
Requirements Management
Requirements Management in TOGAF is an "all-roads lead here" view in the TOGAF ADM. Therefore, all architecture associations lead to requirements development and management.
